

# Tharo PA2000t

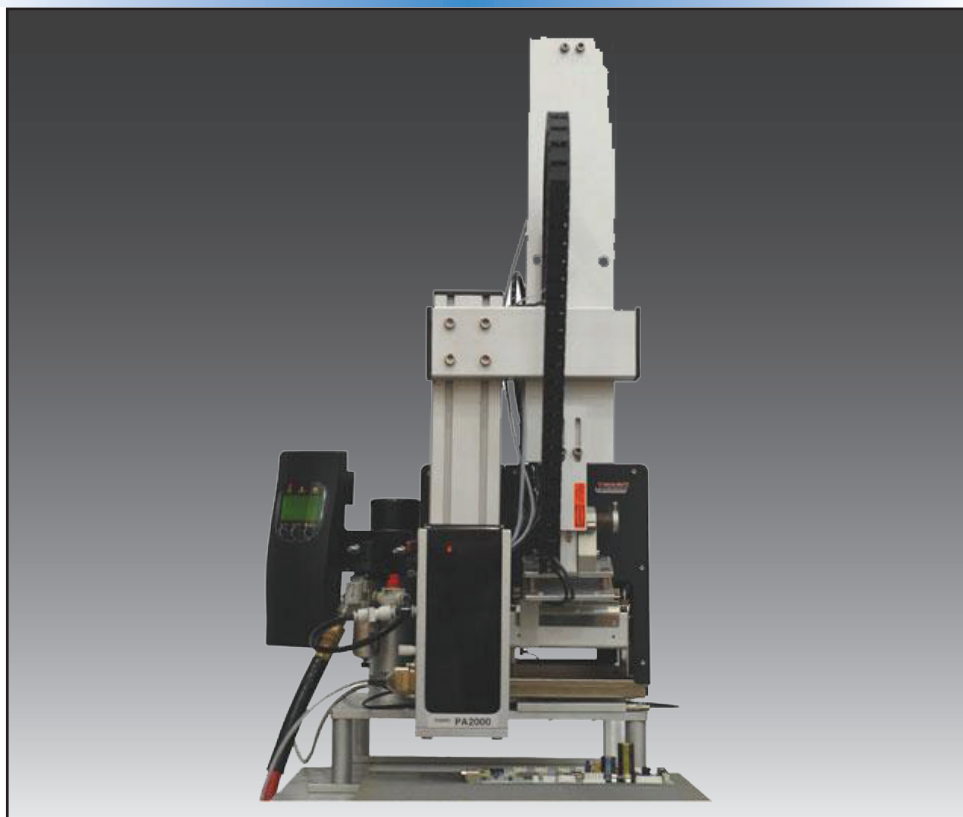

## Tabletop Label Applicator

### Includes:

- 300 dpi Thermal Transfer Printer
- Internal Rewind
- Label Software with Setup
- Tabletop Stand

### Optional Features:

- Front Specialty Tamp Pad  
Places the label on the front of the pill card.
- Conveyor  
A conveyor can be added as well for maximum efficiency.

### Works perfectly with our Pre-Pack Automation!

The automated system adds the pre-pack label and greatly reduces labor costs by saving time. Label applicators are 20% - 25% more efficient.

The tabletop applicator will print the label and position the pre-pack label on the pill card, which works perfectly with the Rx Systems' AutoFiller or AutoTrans Shuttle. Our pharmacy tech simply inserts the filled and sealed card into the guides of the unit and the sensors activate the tamp pad.

Our label software works great with the 300 dpi thermal printer, which builds your pharmacies prescription formulary database and generates reports accordingly. Each label is printed with the corresponding bar scan that contains the necessary data to satisfy the communication with your standard pharmacy software.
